Hello Silvia,
Categorising in the custom Quick filter in not possible as each and every conditions are unique entities itself.
If you want to categorise and filter based on the Name then you can apply the filter in the cards as ?
Name.contains("...is filled (test condition)")
Best Regards
Durgesh

Hi thank you, the filter not at least does not produce any errors. Then i have one more question, is there a possibility to kind of summarize same conditions to one? Currently every condition has a unique condition entity in the epic, and I would like to search for the name, not speficially one ID. As seen in the screenshot, I would like to have one line for "...is filled (test condition)","B", ...).
Is there a way to do that?

Hello Silvia,

I can see that you haven't applied on what hierarchy the filter should be applied.

Please select the Advanced option and then select card and apply the below filter to get the desired Business Epic when Condition is selected.

I have provided a reference screenshot.

Please replace userstory with condition in your case.

Custom quick filter ⓘ

Type

• Condition ⌄

Conditions ⓘ   Use parameters

✓ **All** (recent 150 entities)

🔍 Search

✓ Not assigned

✓ ... is Filled (Test Condition)

✓ ... is Filled (Test Condition)

✓ ... is Filled (Test Condition)

✓ ... is Filled (Test Condition)

✓ ... is Filled (Test Condition)

✓ Apply filter by default ⓘ

☐ Apply filters dependency ⓘ

Apply to ⓘ   Advanced

Check where to apply selected conditions:

☐ 1st hierarchy level

☐ 2nd hierarchy level

☐ Cards

☑ Apply filter by default ⓘ

☐ Apply filters dependency ⓘ

Advanced filters ⓘ   **Revert to default**

Name

> UserStory

In the filter expressions put placeholder {UserStory} in the places where you need the values from the value list to be inserted:

Example
?UserStory.Id is {UserStory}

Filter 1st hierarchy level

> Start from ?

Filter 2nd hierarchy level

> Start from ?

Filter cards

> ?UserStories.Count(id is {UserStory})>0

ts	State

Hi Durgesh, chank you for your reply.
we are working on a custom view (https://intmercedesbenz.tpondemand.com/RestUI/Board.aspx#page=board/5126785597527624201&appConfig=eyJhY2lkIjoiMTEwQzJGQjA1OEIwMUEwOUYwQjg3NUMzNkJEOEVGRUYifQ==) and I will append a few screenshots.
The issue should also be known under the ID 806398.
The entity "condition" was created for our instance and is defined in the portfolio entity (see screenshot 4).
The conditions are then created in every business epic entity of this portfolio (see screenshot 3). So every condition in an epic is unique.
what we would like to do is have a condition filter in the portfolio kanban to filter epics in certain conditions, however this condition filter always shows an error message and does not work properly.

Hello Silvia,
Could you please provide more details about the issue?
Specifically, what filter are you using?
Additionally, please share a relevant screenshot of the view where this filter is applied and clarify your requirement.
This will help me understand the issue more effectively.
Best Regards
Durgesh
